

## AMENDMENTS TO THE SPECIFICATION

Please amend the specification as follows:

Delete the chapter beginning with heading “Description of drawings” on page 4 and replace it with the following chapter:

### BRIEF DESCRIPTION OF THE DRAWINGS

Figure 1 is a view of the medication organizer device with capped bottles containing one time medication portion and empty bottles being attached to the device up side down to indicate that the medication has been taken.

Figure 2 is a view of the medication organizer device for a patient with capped bottles each containing a one time medication portion.

Figure 3. is a view of the medication organizer device with capped bottles containing one time medication portion and empty bottles being attached to the device up side down to indicate that the medication has been taken. The bottle caps are marked indicating the time of the day content of each bottle is meant to be taken. The holding device contains labels for each day the medication is to be taken.

Figure 4 is a side view of a capped bottle containing a one time medication. The cap has a label as to the time of the day the medication is to be taken.

Figure 5 is a side view of a capped tube containing a one time medication. The cap has a label as to the time of the day the medication is to be taken.

Figure 6 shows a patient taking one time medication portion of a bottle. The opening of the bottle is so designed that it fits in between of the sealed lips of the patient thereby preventing spill over. In this embodiment the medication is liquid.

Please, replace the two first sentences of the DESCRIPTION OF INVENTION on page 4 with the following sentences:

The invention consists of a device for holding small ~~tubes~~ tubes (1) or bottles (2) with caps (3). This holding device may be tray like in form or a small box or briefcase (4) form.

Please, replace the sentence beginning at the bottom of page 4 and continuing on page 5 with the following:

Once the neck of the bottle is in the mouth it is ~~tilted~~ peped so as to transfer the medication directly from the tube (1) or the bottle (2) to the mouth as shown in Fig 6.

Please replace the first paragraph of OPERATION OF INVENTION on page 5 with the following:

The invention consists of a box, case, or other device for holding a series of tubes (1) or bottles (2) forming a medicine-dispensing device. The bottles (2) are arranged in the holding device in a specific array that allows for fixing a schedule to take medications on a regular timeframe. At the appropriate time individual bottles (2) are removed, uncapped and the bottle is passed so that the opening (6) is placed between sealed lips (7) of the patient (8). The patient (8) then tilts the bottle (2) in such a way as to cause the medication (9) to be ingested into the mouth, without risk of spillage.

Please replace the second paragraph of OPERATION OF INVENTION on page 5 with the following:

The device will be deployed with a labeling system (10) so that bottles can be located and or labeled either by day or time of day. This might include, but is not limited to "morning", "lunch" and "evening". Figure 3 shows an example of the labelings.

Please, replace the last sentence of paragraph titled as DESCRIPTION AN OPERTAION OF ALTERNATIVE EMBODIMENTS beginning on page 5 and continuing to page 6 with the following:

It is envisaged that after the medication has been taken the bottle (2) or tube (1) can be returned to the carrying device in an inverted position. By having the empty bottles downside (5) up so that it can be easily determined which medications have been ingested.
